# D3 - The Sunshine Vitamin

Healthy Origins Vitamin D3 is a key nutrient manufactured in a highly absorbable liquid form. Vitamin D is a fat -soluble vitamin necessary to help support the growth, development and maintenance of bones and teeth in adults and children. Vitamin D3 is also required for calcium and phosphorus absorption and utilization. In its active form, Vitamin D works with calcium to help control bone formation. \*\*

Vitamin D deficiency is one of the more common medical conditions throughout the world. The primary reason for deficiency is lack of sunlight; however other factors such as age, weight, and skin tone can also play a major role in whether or not you are at an increased risk for Vitamin D deficiency. Prolonged deficiency of Vitamin D may lead to a greater risk of health complications. \*\*
